

An underwater photograph showing various pieces of plastic waste, including white and blue plastic bags, a clear plastic bottle, and some organic debris like leaves and twigs, floating in clear blue water. The scene is lit from above, creating ripples on the surface.

VAN DE SANT
a Circular Innovation Company 

***Comfortable,
sustainable and
circular furniture,
made from recovered
waste streams***

-
- Van de Sant designs and produces comfortable, sustainable furniture made from various reclaimed waste streams.

Sustainability: linear to circular.

Van de Sant's approach is based on the principle that waste does not exist and that materials are secured in a circular economic system.

For example, we process on average per piece of furniture:

2 kg clothing

20 kg recycled plastic

2 kg denim

4 kg metal cutting waste

...and we ensure that it is already determined from the design stage that each component can be reused as a raw material after the end-of-life cycle.

100% circular:

From Designing Out Waste to the Circular Economy

Recover – Recycle – Reuse > Closing the Loop

Our customer becomes our supplier for the future!

This is how waste is transformed into a luxurious lounge chair...

...or sofa

For projects...

...or consumer

A sophisticated living room with teal walls featuring a diamond-shaped tufted pattern. The room is furnished with a blue sofa and a matching armchair, both with gold-colored legs. A large, multi-tiered chandelier hangs from the ceiling. A round coffee table with a black top and a white base sits on a circular rug with a black and white striped pattern. A dark wood sideboard with a lion sculpture on top is visible in the background. The floor is a polished, light-colored material.

We ensure sustainability without concessions

Recognizable by The Green Leg

Van de Sant was the first to translate sustainability into comfort and luxury. By making a mark on quality for sustainable interiors, we came up with The Green Leg. In other words, the Louboutin (red sole heel shoe) under the furniture.

The Green Leg is recognizable by the deep green color on the inside of a single furniture leg, which we mark as a symbol for one of the solutions for a better future. Together with our partners, we lay the foundation for a sustainable and circular future. The trend has been set... Dare to become recognizable, dare to go green!

SUSTAINABLE DEVELOPMENT GOALS

The Sustainable Development Goals are the blueprint to achieve a better and more sustainable future for all. We strive to follow these principles...
